Faces changed. Lives transformed.

These are just a few of the many faces and lives from around the world that have been changed forever by Dr. Chaiyasate's work at Beaumont Children's Hospital.

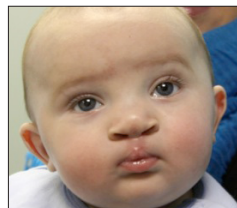

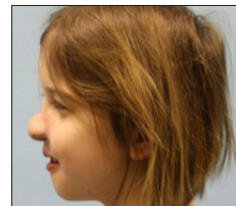

Denis, 2

Denis was born with Apert syndrome, a condition characterized by abnormal growth of the skull and face. When he was 2, Denis' family traveled to Beaumont Children's Hospital from Russia for a consultation with Dr. Chaiyasate, who successfully performed a cranial vault reconstruction and monobloc craniofacial distraction advancement aided by the latest 3-D imaging technology.

Charlotte, 10

Charlotte was left with a severely deformed nose and mouth after a raccoon attacked her when she was an infant. At age 10, she found Dr. Chaiyasate. Over several months, he performed multiple surgeries to repair the damage. Charlotte has a number of procedures remaining, but the results have already restored her confidence and quality of life tremendously.

Elliot, 4 months

Since birth, a bilateral cleft lip and palate made it difficult for Elliott to eat and to breathe. Dr. Chaiyasate's repair changed his life.
